

	Version: 04
EPS Flame Retardant	Date of Issue: June 2019
	Entekhab Polystyrene Petrochemical Co.
	+98 (21) 88664217
	info@snowaens.com
Properties	
Bead Size - Diameter	0.9 – 1.3 mm
Blowing Agent – Pentane	5.6 - 7 %
Residual Styrene Monomer	Less than 1000ppm
Moisture Content	Less than 1%
CFC Content	NII DIN4402 D4 EN 100 44025 2/ EN 42 504 E
Panetty	DIN4102 B1, EN ISO 11925-2/ EN 13 501 E $12 - 20 \text{ kg/m}^3$
Density	15 – 20 kg/m²
Application	
 SNOWA F205 is an EPS class with NON-HBCD flame retardant agent, in accordance with REACH regulative, 	
which can be used in production of EPS foam typically in density ranges between 13 - 20 kg/m ³ , which is suitable	
for high quality block molding and thick wall shape molding.	
 SNOWA F205 in general is used in thermal insulation material for construction applications and for construction contaut modelings which is requiring fire close fighting. 	
Lower densities can be achieved by multiple expansions	
Lower densities can be achieved by multiple expansions.	
Раскінд туре	
 1250kg big bag with inside gas barrier liner 	
 1000kg big bag with inside gas barrier liner 	
 750kg big bag with inside gas barrier liner 	
Storage	
 SNOWA F205 Should be stored in well – ventilated storage areas with a temperature preferably not exceeding 	
25°C. It should be protected against unsuitable weather conditions and direct sun light. Partially used containers	
should be close as tight as original conditions and should be consumed in a short time. In order to maintain the	
expansion potential it is recommended to use material within one month after delivery.	
Processing Conditions	
 Minimum density is dependent upon expander type and pressure/steam conditions. 	
 Recommended silo ageing time must be more than 5 hours to ensure high strength performance of the molded 	
product, but less than 24 hours to ensure good fusion.	
 Maximum silo ageing time strongly depends on ventilation and storage temperature. 	
Caution	
 SNOWA F205 requires to be avoided restrictively from sparks and flames during phases of processing and 	
storage. Grounding of entire equipment and machines are required, in order to prevent against static electricity	
development on the product conveying lines and duri	ng product processing.
Flammable pentane-air mixtures may be generated during storage and processing, for this reason adequate	
ventilation must be ensured. Please make sure to read the "Safety Data Sheet" (SDS), which contains entire	
details of the measurements required to be taken.	
- SNOWA F203 is not suitable and not permitted to be used in food contact applications.
